

READING	The test consists of 4 sections:	
	Part 1: Sentence comprehension	Part 3: Opinion matching
	Part 2: Text cohesion	Part 4: Long text comprehension
	Total time: 35 minutes	

Part 1: Choose one word in the list for each gap. The first one is done for you

- Example 0.** **A. buy** B. eat C. watch
1. A. very B. more C. some
2. A. think B. remember C. forget
3. A. closes B. loses C. works
4. A. hospital B. room C. business
5. A. almost B. around C. nearly

Hi Pete,

Can you **(0) buy** some things after you finish work today?

We need (1)_____ milk and eggs.

Don't (2)_____ to get a can of dog food.

The shop (3)_____ late today.

I have an appointment at the (4)_____ .

I will see you at home at (5) _____ 7 o'clock.

Love,

Samantha

Part 2: The sentences below are from the report. Put the sentences in the right order. The first sentence is done for you.

- Example A. William Bell was born in Argentina in 1953.**
- B. He used his popularity to help many young people learn to ride and take care of horses.
- C. When he was a child, he lived on a farm and he loved animals.
- D. After his success, he went on to win many international competitions and he became very famous.
- E. Eventually he retired and returned home to his farm in Argentina.
- F. He won his first riding competition when he was fifteen.
- G. He worked with horses on the farm after school and became a very good horse rider.

1- A 2- 3- 4- 5- 6-

A. If you are visiting our office for the first time, please follow these instructions.

B. A member of staff will write this information in the visitor's book.

C. Before you leave, please return the card to a member of staff at the front desk.

D. You can then use the card to enter through the security gate.

E. Next, he or she will give you a visitor's identity card.

F. You should go to the front desk upon arrival and give your name and address.

1- A 2- 3- 4- 5- 6-

Part 3: Match four people's opinions to seven statements by selecting the correct person

Person A

In my opinion, all this 'eat five portions of fruit and veg a day' is a big con! Most of my adult life I've avoided eating fruit and vegetables, and I'm super-fit. I think it's just big business trying to sell us so-called superfoods that we don't need. As prehistoric people we only ate meat, plus a few roots and berries. My diet is very simple – I eat a lot of bread and pasta, meat and eggs, some fats in the form of cheese, and I have plenty of fluids.

Person B

I live by the mantra 'you are what you eat'. I focus on natural proteins, and I don't eat any processed food or simple carbohydrates at all. Not only that, I fast from 5pm to 11am the following day – all I have in the mornings is a black coffee. Lots of research has been done to show how intermittent fasting combined with eating the right food can help combat things like depression, high blood pressure, heart disease and diabetes.

Person C

I have a glass of milk for breakfast and I have lunch at school. The canteen there's OK, I suppose, though I do think they should prepare more vegetable dishes. A lot of the food is meat-based and most things are fried, which isn't very healthy. At least they always have fresh fruit every day, which is one good thing. When I get home I normally have lots of carbohydrates, as I do a lot of sports and I'm always hungry!

Person D

I never cook – I don't have time to even think about what to eat! In my opinion, food shouldn't dominate our lives – other things are far more important. I'm a full-time university student and I also work in the evenings, so I eat whatever my parents cook for me. If I'm going straight from class to work, I'll eat some street food. Luckily, a lot of street food is incredibly healthy – especially spring rolls and noodle soup, which is delicious.

Four people respond in the comments section of an online magazine article about education and work. Read their comments and answer the questions below.

1. Who worries least about eating healthily?

A B C D

2. Who is the most conscious about what they eat?

A B C D

3. Who thinks advice about diet is really about making money?

A B C D

4. Who is too busy to cook anything?

A B C D

5. Who isn't happy about the selection of food on offer?

A B C D

6. Who feels that what they eat hasn't affected their health?

A B C D

7. Who never eats in the evenings?

A B C D

Part 4: Select the appropriate heading to match the paragraph from 1 to 7.

- A** Difficult to change old habits
- B** Alternative solutions worth considering
- C** A way of life now out of date
- D** Unfair for employees
- E** Benefits for employees
- F** Undesirable financial consequences
- G** Negative effects on customer service
- H** Unforeseen challenges for employees.

The Arrival of the Four-Day Work Week

1. For many decades, working five or even six days a week was seen as the norm. About 100 years ago, Henry Ford (founder of Ford Motor Company) proposed giving workers Saturday and Sunday off with full pay. However, with modern technology, changing values, and a greater focus on work-life balance, that lifestyle is becoming less relevant. Employees and companies alike are beginning to question whether spending most of one's week at work is still necessary or productive.

2. Supporters of the four-day workweek argue that this model brings many obvious benefits to employees. They feel more satisfied with their jobs, more relaxed and more motivated to contribute. Having an extra day off helps them balance work and personal life, giving them the opportunity to care for their family, relax or pursue personal interests. This not only improves mental health but also contributes to increased productivity when they return to work.

3. Despite its positive potential, the adoption of a four-day workweek also comes with its fair share of concerns, particularly financial ones. Businesses in the service or retail sectors may struggle to maintain continuous operations with reduced staffing. To compensate, they may have to hire more people, leading to increased costs in salaries, training and management. For smaller companies, this can easily become a major challenge in terms of budgets and ability to maintain operations.

4. A shortened workweek does not always bring a sense of relief. In fact, many employees worry that the workload will be compressed, making the four-day workday more stressful than usual. The compressed schedule can increase psychological and physical pressure, causing work efficiency to decline rather than improve. Concerns that “compressing work into shorter hours” may be counterproductive to the original goal.

5. One of the biggest barriers to changing working patterns is the stability of long-standing habits. The five-day workday structure affects not only the office workers but is also closely linked to the education system, public services and many other social activities. From schools, government agencies to shopping or entertainment centers – all are operating on this time frame. Adjusting the entire system like this will not be easy and is likely to face opposition from many sides.

6. Another issue raised is fairness between labor groups. While office workers may benefit from the new work schedule, professions that require physical presence such as police, fire or emergency services have few options. They cannot simply reduce the working day without ensuring continuity in work. This could widen the gap between occupational classes and create divisions in society.

7. Given the potential difficulties, some experts suggest more flexible approaches instead of shortening the work week. Models such as remote working, job sharing or flexible working hours are considered more suitable in some cases. These solutions give employees more control over their time without putting pressure on businesses to change the entire operating structure. Therefore, the goal of work-life balance can still be achieved without creating many barriers.

READING	The test consists of 4 sections: Part 1: Sentence comprehension Part 3: Opinion matching Part 2: Text cohesion Part 4: Long text comprehension Total time: 35 minutes
----------------	---

Part 1: Choose one word in the list for each gap. The first one is done for you

- Example 0.** **A. well** B. hope C. go
1. A. journey B. travel C. trip
2. A. sun B. rain C. showers
3. A. on B. at C. in
4. A. having B. had C. got
5. A. next week B. the next week C. on next week

Dear Aida,

How are you? I hope that you're (0) **well** .

At the moment I'm on a school (1) _____ to Paris with the students.

The weather is fantastic – we've had (2) _____ every day so far.

Tomorrow we're going to go (3) _____ a boat trip down the River Seine.

Next Friday we've (4) _____ a walking tour.

See you (5) _____ ,

Samantha

Part 2: The sentences below are from the report. Put the sentences in the right order.
The first sentence is done for you.

- Example A. So you want to get fit? We can help you! Follow these easy steps.**
- B. Once there, you'll see a big blue button saying 'Sign up'.
- C. Fill it in with all your personal details and then click 'Send'.
- D. You'll receive a confirmation email immediately.
- E. Click on the button and the registration form will open.
- F. It will take you to the home page of our website.
- G. Begin by following the link below this advertisement

1- A 2- 3- 4- 5- 6-

A. This report gives information regarding public transportation in the city.

B. They all agreed that there is not enough service in morning rush hour.

C. If we do this, we will have more satisfied customers.

D. We interviewed 1000 citizens who take the bus at least 5 days a week.

E. Additionally, they said that the busses are too crowded.

F. This is why we believe we must add more vehicles to busy routes.

Part 3: Four people respond in the comments section of an online magazine article about education and work. Match four people's opinions to seven statements by selecting the correct person

Education and Work

Person A

As you get older, responsibilities like a job and family dominate your life. It can be hard to balance things. Studying at university is demanding. So, you should do it at an age when you are independent and carefree. It is also important to learn how the world of business works. Spending unpaid time in a company is a great way to get that experience. Any course that can give you an opportunity to do that is worth considering.

Person B

Life doesn't really get serious until you hit your mid-twenties. Before that, try out different things and get some life experience. It's only as you approach your thirties that you need to get serious about your career. That's the time to start thinking about further education. Many colleges offer inexpensive courses for more mature students. Going back to student life for a year is a great idea and you can then return to the world of work at management level.

Person C

Nowadays it is popular for school leavers to take a break before they think about an occupation or a place at university. I think the most important thing is to start working as soon as you can. You need practical experience for your CV and that can be more valuable than a diploma. Nevertheless, your studies do not have to stop just because you are working. Colleges and universities offer options for people who want to do both.

Person D

I think we should all keep learning, but you don't need a piece of paper from an institution to prove it. There are many free courses available online. Of course, not all are good, but a little research will help you identify which one is best for you. A lot of young people get into debt because they have to pay for their studies. With the resources available online these days, you can take control. You won't regret it.

- | | | | | |
|--|---|---|---|---|
| 1. Who thinks you should study when you are older? | A | B | C | D |
| 2. Who thinks formal qualifications are too expensive? | A | B | C | D |
| 3. Who thinks you should go to university when you are young? | A | B | C | D |
| 4. Who thinks you should study independently? | A | B | C | D |
| 5. Who thinks you should combine a job with studying? | A | B | C | D |
| 6. Who think you should choose a course that is practical? | A | B | C | D |
| 7. Who thinks you should get a job immediately after leaving school? | A | B | C | D |

Part 4: Select the appropriate heading to match the paragraph from 1 to 7.

- A** Attempting to create a gender balance
- B** Man unfairly credited
- C** Financial rewards for success
- D** Acknowledging achievement of a pioneer
- E** Labels can change perspective on people
- F** Gender obscure achievements
- G** Uniformity is not always an advantage
- H** A long career showing exceptional ability

Women in Mathematics

1. In 2014, Iranian mathematician Maryam Mirzakhani received the prestigious Fields Prize, the highest honor in mathematics, and the first time in its 70 years that a woman has won it. For centuries, the achievements of women in mathematics were either omitted from historical records or attributed to male colleagues. Many of their contributions were later credited to male scholars. Such erasure has been a recurring theme in the history of women in this field.

2. Despite the many obstacles women faced in entering the field of mathematics, Sophie Germain stood out as a great female mathematician. Largely self-taught, she pursued her passion in a time when women were discouraged from academic pursuits. She made significant contributions to number theory and elasticity, and her work on Fermat's Last Theorem was particularly notable. In

recognition of her groundbreaking efforts, she became the first woman to win a prize from the Paris Academy of Sciences in 1816 — an award originally proposed back in 1716. This long-standing prize had never before been awarded to a woman, highlighting the importance of Germain's achievements and marking a turning point in the acknowledgment of women in science.

3. Maria Agnesi, an 18th-century Italian mathematician, was one of the first women to write a comprehensive mathematics textbook. Her work, the *Instituzioni Analitiche*, was highly praised and became an important reference in the study of calculus. Despite her original contributions, one of the mathematical curves she described — the "Witch of Agnesi" — was mistranslated from Italian, giving it a mystical name that misrepresented her intent. Moreover, over time, credit for aspects of her work was sometimes attributed to male mathematicians who built upon her ideas. This reflects a broader pattern in history where women's intellectual achievements were overlooked or reassigned to men.

4. Millicent Fawcett demonstrated remarkable intellectual ability from a young age. At just 19, she delivered a public lecture on Sir Isaac Newton at a time when women rarely spoke in academic settings. Although she did not pursue a professional career in mathematics, her early accomplishments in the subject reflected a sharp analytical mind. Over the decades, Fawcett dedicated herself to advocating for women's education and suffrage, tirelessly working to open academic and political doors for future generations. Her lifelong commitment to intellectual and social progress stands as a testament to her exceptional capabilities and enduring influence.

5. When female mathematicians are described as "women geniuses" or "female prodigies," the gender label, while well-intended, often implies that excellence is rare among women. Such terms, though celebratory, can unintentionally reinforce the idea that women's success in mathematics is unusual, rather than simply the result of talent and hard work.

6. To address the gender imbalance in mathematics, many universities and organizations now run outreach programs, offer scholarships specifically for women, and encourage female mentorship in STEM fields. Some universities are required to arrange places where female mathematicians can work and research. These efforts aim not to give unfair advantage, but to create equal opportunities in a domain where women have historically been underrepresented.

7. In efforts to level the playing field, some institutions have implemented standardized criteria for admissions or research evaluation. However, such uniform methods can sometimes ignore the diverse paths and challenges faced by individuals, particularly women balancing academic and societal expectations. A one-size-fits-all approach may not always foster true equity.
